CONSTRUCTECH

Carol Stream, Ill. – Jan. 29, 2009 – Today, Constructech magazine named the winners in the second annual Constructech Top Products awards in the residential market.

The Constructech Top Products awards honor technology solutions geared toward the homebuilding market. Winning products are those that are the most innovative and have brought about the most successful results. Judged by the editorial team at Constructech, winning products are chosen based on product description, the product's overall usefulness and uniqueness to the construction industry, and the customer growth rate for the particular product throughout the past few years.

Today, builders are continuing to use technology strategies to improve business practices. However, in this economic climate, this means adapting in order to make these improvements with less investment.

"Being named one of the Constructech Top Products is a testament of the dedication and innovative approach held by the technology providers serving the construction space. These companies work to provide builders with the solutions they need in order to be efficient and competitive in today's economy," said Mike Carrozzo, chief editor of Constructech.

The companies with products named among the Constructech Top Products this year have taken note of the marketplace as it is today, and continue to provide technology that brings important benefits and also leaves room for growth. "

The winners of the residential Constructech Top Products of 2009 are:

New Products: (in the market less than two years):

My1440Home from Builder1440 LLC

HomeFront Field PO Request from HomeFront Software

Schlage LiNK from Ingersoll Rand Security Technologies

Paperless Service Management from Jonas Software

ConstructionSuite 2009 from UDA Technologies

Enhanced Products:
